

How-To: Enabling Push Notifications

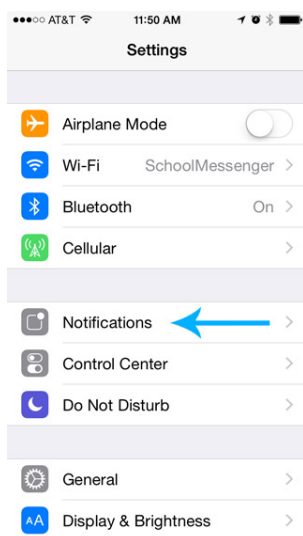

Apple Devices:

When a user installs the District Mobile App on an Apple device, the first time they open the app it will ask if they want to allow Push Notifications. By allowing push notifications at this point the user will not need to follow the below instructions.

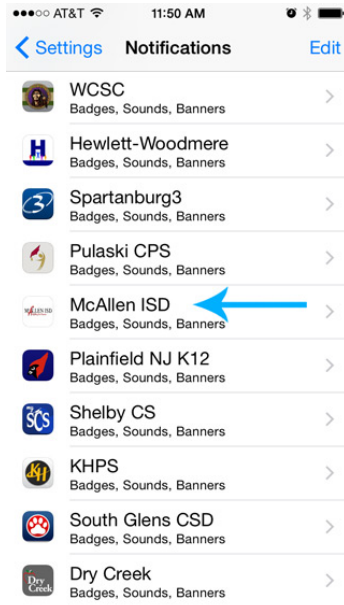

If the user inadvertently selects “Don’t Allow” on this screen, the following instructions will turn the notifications back on for the app.

- 1) Go to the Settings App on your Apple Device
- 2) Tap on the Notifications Settings

3) Scroll down to the District App in the list

4) Turn on the “Allow Notifications” option. (In this screen you also have the ability to set how you would like the notification to appear on your device.)

How-To: Enabling Push Notifications

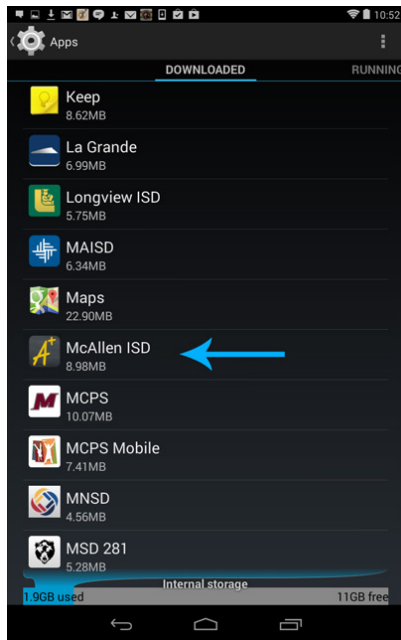

Android Devices:

Typically push notifications are turned on by default when you install the Android version of the District App. If you find you are not receiving push notifications via the app, the following instructions will turn those on.

- 1) Open the Settings app on your Android device
- 2) Tap on the “Apps” option in the list

3) Browse to the District App in the list

4) Check the box next to Push Notifications to turn them on
